

Table of Contents

§	Document	What it presents
1	Executive-summary (why this packet & how to skim)	Big-picture first
2	Form-Graph Roadmap (Doc 1 PDF)	Minute-by-minute shape, three “big questions,” Light Shadow duties
3	MacOS Composer Console (Doc 2 PNG)	How primer-tones & light cues are triggered, what buttons matter to you
4	Smartphone Client App (Doc 3 PNG)	What each singer sees, what controls they have (or don’t)
5	Stage-Layout & Role Colours (Doc 4 PNG)	Physical placement, color coding & the 27 + 27 split
6	Score-Format Demo (Doc 5 PDF)	How the 12-stave “3 + 9” score looks on paper
7	Pro Tools Session Snapshot (Doc 6 PNG)	Audio mock-up routing and how your cues hit the PA
8	Apple Multicast Entitlement (Doc 7 PNG)	Why our network traffic is now stable & rehearsal-ready
9	Next-step checklist	What we’ll cover in tomorrow’s meeting
10	Quick-reference glossary	“Primer tone,” “PoA,” etc.

1 ▪ **Executive-summary — *read this page if time is short***

- Dual-Choir idea**
Light Choir (27 singers + phones) sings 2-5-syllable answers & supplies the flashlight glow; *Shadow Choir* (27 singers, no phones) carries the tougher questions.
 - Three anchor questions** shape the 9-minute arc:
0:45 — Where is God? 1:50 — What is the Brave World? 5:40 — Who are we?
At 1:45, 5:15 and 8:30 both choirs lock in homophony (*Points of Alignment*, marked “PoA” in the materials).
 - You cue one “high-tech percussionist.”**
A single chorister owns the 28th phone with a giant **NEXT** button. When you nod, they tap, and the next sound event + light cue fires for everyone.
 - Tomorrow’s rehearsal focus**
 - Listen to Jon’s EastWest demo (0 – 6 min).
 - Approve / tweak text for Sections 1 & 2.
 - Plan the musical & textual shape of Section 3 (6 – 9 min).
-

2 ▪ Form-Graph Roadmap (Doc 1 — PDF)

Key take-aways for Clare:

Time	What you conduct	Visual cue
0:00–0:40	Whisper “murmur-bed” (Shadow); sporadic primer flashes (Light)	Low purple wash only
0:45	Big Arrival #1 — single fortissimo line “WHERE IS GOD?”	All slots flash white
1:45	PoA #1 “In the land of the free ...”	All phones steady mint
2:00–3:00	<i>Shadow-only</i> chorale (no phones) — Clare controls controls rubato	Stage dark
3:00–4:45	Crescendo to Brave-World reveal; Light answers in 2-5-syllable bursts	Rainbow pulses
4:55	Fake ending (“Black-out!”) — immediate hush	Total blackout
5:15	PoA #2 hand-off from Brave-World → Who-are-we	Steady cyan
5:50–6:40	Call-and-response “How do we find our way?” (traditional feel)	Minimal lighting
7:10	Big Arrival #2	Rapid strobe
8:30	PoA #3 final homophony “Even a small light ...”	Wide white flood
8:50–9:00	Electronics tail only	No voices

Under-the-hood

Light Choir must always follow primer-tone cues; *Shadow Choir* never does. Primer tones = “flashlights” in title.

3 ▪ MacOS Composer Console (Doc 2)

(See screenshot)

UI Area	What it does	What you may need
Top buttons (All On, Slow Glow Ramp, etc.)	Lighting presets for tech rehearsals. In performance they stay OFF; everything is cued by MIDI/primer triggers.	
Grid of coloured slots	27 real phones (outlined) + grey placeholders. Bright white halo = phone just triggered.	
Tone Sets panel (left)	Lists pT primer tones and three 3-channel sound-event banks (seL, seC, seR).	
MIDI Controls	You decide which MIDI input you trust (your baton clicker foot-switch, or none). Output stays “Flashlights Bridge In.”	

Cheat-sheet: treat the console like a lighting desk you never have to touch once show settings are locked; your only live collaborator is the **NEXT-button chorister (Jon)**.

4 ▪ Smartphone Client App (Doc 3)

Screen element	Meaning for singers
Singer # badge	Numeric slot that matches colour on stage plot.
Slot picker	Only active during pre-show pairing.
Mute torch / mute speaker icons	Safety kills; we ask singers <i>never</i> to touch them once seated.
Status line “iOS — Connected”	Turns red if Wi-Fi drops; we’ll rehearse a manual fallback cue (hum).

5 ▪ Stage-Layout & Color Key (Doc 4)

Image shows a wide fan of 54 circles, each ring-coloured; empty greyish dots mark riser spots for dark-chorus singers (who don't use smartphones).

Colour ↔ MIDI channel ↔ role

Colour	Slot nos.	MIDI primer ch	Choir hal
Royal Blue	27 / 41 / 42	1	Light
Red	1 / 14 / 15	2	Light
Green	16 / 29 / 44	3	Light
...	...	...	...
White (slot 5)	Controller phone (NEXT operator)	—	Neutral

(Full table lives in Jon's coding spec; colours matter for rehearsing independent answers.)

6 ▪ Score-Format Demo (Doc 5)

PDF page shows 12 staves:

Top 3 — Sops, Altos, Ten/Bass (traditional)

Next 9 — PhoneSinger A2...A1 (one stave per colour-group)

Two bottom — 9-ch Primer Tone & 3-ch LCR Sound-Events

Conducting tip

Count it like an oratorio with continuo: primer-tone stave is your continuo part. If it rests, Light Choir rests.

7 ▪ Pro Tools Session Snapshot (Doc 6)

Fader strip shows 18 colour-coded MIDI tracks then grey audio returns.

Track type	Purpose	Cue source
pT-Blue ... pT-Cyar	Nine MIDI primer-tone lanes sent to phones on ch 1-9.	Sequenced OR live keyboard
seL / seC / seR bus	Pre-rendered electronic events (LCR)	Triggered by NEXT phone
LightTrigs	Channel-10 torch pulses	Same NEXT trigger

8 ▪ Apple Multicast Entitlement (Doc 7)

We now have **Multicast Networking** capability.

Translation: iPhones will stay perfectly synced over our private Wi-Fi; no more noticeable flashlight latency.

9 ▪ July meeting agenda (first 2/3 read/listen-through)

Step	Time	Materials
Quick orientation using Stage-Layout (Doc 4)	5 min	Risers + colours
Listen to demo (0-6 min)	10 min	Pro Tools playback
Text tweaks Section 1 & 2	15 min	Mark score PDFs
Brainstorm Section 3 text & pacing	20 min	Blank timeline sheets
Tech run: practice PoA #1 & fake-ending blackout	10 min	Console live

10 ▪ Glossary (speed-reference)

Term	Meaning
Primer Tone	Short or long synth ping (0-48 / 50-98) sent to one phone colour-group; Light Choir echoes it vocally.
Light Choir	27 singers + phones; optimistic text; must follow primer-tones exactly.
Shadow Choir	27 singers; no phones; provokes with longer, darker lines.
NEXT phone	The 28th handset acting as a one-button sampler percussionist.
Point of Alignment (PoA)	Time-stamp where both choirs sing in conventional homophony; marked 1 : 45, 5 : 15, 8 : 30.
LCR Event	A three-channel electronic sound (Left/Center/Right) played from all phones simultaneously.
